Sturgeon Bay and CanalNOAA Chart 14919

A reduced-scale NOAA nautical chart for small boaters When possible, use the full-size NOAA chart for navigation.

- Complete, reduced-scale nautical chart
- Print at home for free
- Convenient size
- Up-to-date with Notices to Mariners
- Compiled by NOAA's Office of Coast Survey, the nation's chartmaker

Published by the National Oceanic and Atmospheric Administration National Ocean Service Office of Coast Survey

What are Nautical Charts?

Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America's commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

What is a BookletChart[™]?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

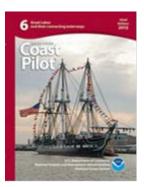

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at http://www.NauticalCharts.NOAA.gov.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

Notice to Mariners Correction Status

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

(Selected Excerpts from Coast Pilot)
Sturgeon Bay Ship Canal provides a
navigable connection between Lake
Michigan and the south end of Green Bay.
A canal has been cut from Lake Michigan
across a narrow strip of land to the head
of Sturgeon Bay, and thence a dredged
channel leads through Sturgeon Bay to
Green Bay. The Lake Michigan entrance to
the canal is about 126 miles north of
Milwaukee Harbor, across the lake west of
Frankfort, MI

Sturgeon Bay Ship Canal Light (44°47.7'N., 87°18.8'W.), 107 feet above the water, is shown from a white cylindrical tower on the north side of the canal entrance.

Channels.—The dredged channel from Lake Michigan to Green Bay is about 8.6 miles long. The channel leads northwest from deep water in Lake Michigan through detached piers and converging breakwaters, thence through a revetted canal to the southeast end of Sturgeon Bay and thence through Sturgeon Bay to the vicinity of Sherwood Point. (See Notice to Mariners and the latest edition of the chart for controlling depths.) The outer ends of the piers are marked by lights, and the approach channel is marked by unlighted buoys 0.2 mile southeast of the pierhead lights. A sound signal at the north pierhead light is operated by keying the microphone five times on VHF-FM channel 83A/157.175 MHz. A seasonal lighted buoy marks the south edge of a detached shoal about 1.3 miles southeast of the pierhead lights. The dredged channels through the canal and Sturgeon Bay are well marked with lights, a lighted range, and lighted and unlighted buoys. Currents in the canal and bay attain velocities up to 7 mph in either direction.

Mariners are cautioned against navigating outside channel limits in the vicinity of structures protected by stone riprap.

The channels and basin are not adapted for anchorage of vessels; vessels entering the canal for shelter may moor at the west end of same. Sturgeon Bay is a natural branch of Green Bay, but the navigational aids that mark the channel through it are placed with respect to proceeding from Lake Michigan through the ship canal to Green Bay.

Dangers.—A shoal with a least depth of 16 feet is 1.3 miles southeast of the Lake Michigan entrance to the canal. A lighted buoy at the south end of the shoal marks the approach to the canal.

A solid rock ledge, covered 10 feet, borders the southwest side of the dredged approach channel. Vessels entering the canal should avoid courses that will carry them close and should enter the dredged approach channel between the unlighted buoys at its outer end.

Bridges.—An overhead power cable with a clearance of 140 feet crosses the canal 1.25 miles above the Lake Michigan entrance. Bay View (State Routes 42/57) bascule highway bridge, with a clearance of 42 feet, crosses the canal 3 miles above the entrance. The Maple-Oregon Street bascule bridge, 1.3 miles above the Bay View bridge, has a clearance of 25 feet at the center, decreasing to 15 feet at the channel limits. The Michigan Street bridge, 700 feet above the Maple-Oregon bridge, has a bascule span with a clearance of 14 feet. (See 33 CFR 117.1 through 117.59 and 117.1101, chapter 2, for drawbridge regulations.) Coast Guard.—Sturgeon Bay Canal Coast Guard Station is on the north

side of the Lake Michigan entrance.

A speed limit of 5 mph (4.3 knots) is enforced in the Sturgeon Bay Ship Canal. (See 33 CFR 162.125 and 207.470, chapter 2, for navigation regulations.)

Sturgeon Bay, WI, is a city on the Sturgeon Bay Ship Canal midway between Lake Michigan and Green Bay. The city is an important repair center, having facilities for repairs to all types and sizes of craft.

Anchorages.—Special anchorages are on the north side of the dredged channel at the Bayview Bridge and on the south side of the channel 0.8 mile west of the bridge. (See **33 CFR 110.1 and 110.78,** chapter 2, for limits and regulations.)

Towage.—Tugs to 2,000 hp are available at Sturgeon Bay from Selvick Marine Towing Corporation. Arrangements are made through their dispatch office in Sturgeon Bay at 920–743–6016. Tugs are also available from Green Bay. (See Towage under Green Bay.) The tugs monitor VHF-FM channel 16.

VHF Marine Radio channels for use on the waterways:

Channel 6 – Inter-ship safety communications.

Channel 9 – Communications between boats and ship-to-coast.

Channel 13 – Navigation purposes at bridges, locks, and harbors.

Channel 16 – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other

vessels. Contact the other vessel, agree to another channel, and then switch.

Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here. Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

Getting and Giving Help — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

Distress Call Procedures

- Make sure radio is on.
- Select Channel 16.
- Press/Hold the transmit button.
- Clearly say: "MAYDAY, MAYDAY, MAYDAY."
- Also give: Vessel Name and/or Description; Position and/or Location; Nature of

Emergency; Number of People on Board.

- · Release transmit button.
- Wait for 10 seconds If no response Repeat MAYDAY call.

HAVE ALL PERSONS PUT ON LIFE JACKETS!

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
